Data Xgen Technologies

Data xgen technologies Pvt Ltd. develops and delivers enterprise email management solution for clients worldwide. It offers Xgenplus, an enterprise email server, which provides secure unified communications, such as email, transactional emails, push mail, group emails, chat, SMS, e-marketing, and faxing at one place.

Recently Data Xgen Technologies got global attention for bringing in first of its kind IDN email supporting email addresses in 8 Indian languages as well as 3 International Languages. Datamail is world's first Linguistic email application, no one is providing this kind of facility to email user. This application is completely free for users, so non-

technical users can also easily create their email ID in their own language and can connect with the technology.

The company offers email solutions for organizations from small businesses, to enterprise, to data centers and hosting companies, as well as ISPs, BPOs, colleges and schools, and governments. Its clients include banks, national/state security agencies, manufacturing companies, insurance and advertising agencies, agricultural and architectural firms, law and accounting firms, and others. The company was incorporated in 2010 and is based in Jaipur, India.

Our Approach

We at Xgenplus believe in the concept of constant Innovation, Growth and Development. We believe that in this swiftly changing world of technology, the only way to succeed is to evolve, and evolve often. That's the way we approach Xgenplus and this approach has led Xgenplus to be the most advanced Email Enterprise Solution available in market.

Throughout these years, we have anticipated key growth areas, sailed through technology fads, and constantly had our eyes on what the future has to offer – resulting in a successful product that has fulfilled the email needs of many companies.

The vision of Xgenplus is to continue to innovate and be a global leader in the email market-place by being a premium next-generation email platform and to serve the entire spectrum of organizations – from small businesses, to enterprise, to multi-million user data centers – on the same scalable, secure and affordable platform.

What We Stand For

Technically Ingenious

With clear vision and determination, we ascribe to our conviction. We march ahead to break pigeonholes. We achieve customer and employee satisfaction. We guard your faith. We interpret technology according to your needs. We challenge ourselves to innovate for you. We strive to deliver proficiency at your desk. We explore possibilities to make them realities. We dream around you. It takes a little more than conviction to make these dreams true. We do it. Some call us path-breakers, some different. We like to call ourselves Technically Ingenious.

Our Innovation:

We are first IDN email service provider. With our services now users can get their email ID in their own language. Before executing this idea we analyze that language is a main hurdle for users to use internet & email ID's. Only 10.35% people in India are English speakers and readers. They can not understand English and write English. So they are deprived from email services and still away from the technology. To make them forward and step up with the technology & email ID's we launched DataMail. With Datamail users can get their email Id's in their own language and can communicate with the people in their language only. They need not to have knowledge of English.

DATAMAIL

As the online population grows, there is an increasing need to make the Internet more accessible in local languages and email address internationalization (EAI) has an important role to play.

DataMail world's first free email service for national and international languages. DataMail is currently available in English and eight Indian languages - Hindi, Gujarati, Urdu, Punjabi, Tamil, Telugu, Bengali and Marathi – as well as Russian, Chinese, Arabic and more languages & cyrillic.

DATA RADIO

DataRadio is an innovative way to bring people on a digital platform by creating their own mobile channel or tuning channels. The share feature in DataRadio allows user to connect with millions of users on a single DataRadio channel. Also, the tuned channel can be further shared to more users thus it helps in forming a wide social network. DataRadio is free of cost feature of DataMail, everyone can use this feature to connect with their peer groups. It is of great use for ministries and the allied departments in the country, panchayat, doctors, banks, education universities, Celebrities where one way communication plays a major role.

XGENPLUS ADMIN APPLICATION

Xgenplus is introducing Mobile Admin application. Domain Administrators can now have access to admin feature through their Android phones. Admin app allow the administrator to manage email users anytime anywhere and support them without worrying about the access to computer or laptop.

Xgenplus Opportunities for System Integrators

Xgenplus having the processes to bring customers onboard, provide advanced features and customized services, and manage ongoing relationships. It's important to have a stable, repeatable, branded methodology for bringing new customers onboard.
