

Breakthrough Antispam Technology

SPAMJadoo

Never See another SPAM again

Data Xgen Technologies Pvt Ltd. is focused on enhancing the infrastructure and tools available for the business communication and collaboration. Other anti-spam solutions operate at the content level but SpamJadoo blocks spam at email transport protocol (SMTP) level. Here's where Spamjadoo is different from other antispam solutions available in the market . Working at the protocol level enables SpamJadoo to "magically" stop spam before it is even sent !The technology that enables Spamjadoo to work its magic is ESP (Eliminate Spam at Protocol level).

Nowadays, Spam is a problem for every individual & organization. Last year it was found that 60% of SMB's got hit by phishing attacks that costs them million dollar data loss. According to Verizon's 2017 Data Breach Investigations Report, two-thirds of all malware was installed via email attachments in 2016. 60% of malware was packaged in JavaScript attachments, while 26% was packaged in malicious macros embedded in documents.

Spam mails may contains promotional ads, money scams, malwares , ad wares that may make you the victim of phishing and hacking attacks and steal your valuable data that you have never thought off. Boot Sector Virus. Web Scripting Virus. Browser Hijacker, Resident Virus, Direct Action Virus, Polymorphic Virus, File Infector Virus, Multipartite Virus, Trojan, worms, Spyware, Malware, Adware & Ransomware are few of the harmful viruses that has impacted almost every organizations in the past and ruined virtual data costing million dollars.

Is your smart enough to protect your mailbox from spam mail? Think Again!!

Is your mailbox IDN/IPV6 ready??

**“Its better to stay smart than to regret in future”
Antispam Technology has reached to next level.**

Introducing World's first IDN Compliant Antispam Solution (Support IPv6)

STOP SPAM, SAVE TIME!!

Spamjadoo is the world's only IDN compliant Anti Spam Software that can be integrated with the Internationalized domain name email system.

Spamjadoo – the ULTIMATE spam eradication solution – presents a comprehensive and permanent fix to this problem. SpamJadoo is based on the revolutionary ESP (Eliminate Spam at Protocol level) technology that incorporates automated processes to build and update your trusted senders' list and ensures email privacy without ever losing bona-fide mails.

It is a completely new approach to spam elimination, based on the privacy principle. Its innovative ESP (Eliminate Spam at Protocol level) and EAI (Email Address Internationalization) and IDN email /International email) makes SpamJadoo, a world class anti-spam products in anti spam softwares.

Never See another SPAM again

Magic Mailbox. Really??

JMail accounts

The JMail sub-system is another unique, revolutionary and thoughtful feature of ESP. It allows custom JMail accounts to be created as programmable extensions to your mail account and rules to be assigned to each such account. You can then invite trusted senders into your mailbox without compromising your privacy.

Even if a trusted sender's computer is hacked, or address book data (including your JMail id) is stolen, the JMail account is not accessible to anyone else without your permission. And the JMail accounts can be configured by you in a variety of ways to support common usage scenarios – newsletter subscription and online shopping are just two examples. In fact, JMail accounts offer a powerful way for you to sort and organize your incoming mail, without incurring the inconvenience of managing multiple mail accounts and Inbox folders.

Focal Points:

- ✓ Solution Support IDN & IPv6
- ✓ Offers real-time spam protection over SMTP, POP3, IMAP protocols, protecting organizations from zero-hour threats and blended attacks that involve spam, malware, botnets, phishing, Trojans and more.
- ✓ Solution offers 98% protection against zero-hour attacks with false positive rate, minimizing the threat of business mail loss.
- ✓ Centralized management console simplifies user management.
- ✓ Freedom to define different type of profiles with different security features and restrictions.
